

?Oh, I get it!? says reader

I cannot understand the difference between gas price in Canada and the U.S.

In my crude math, \$2 per gallon in the U.S. translates to less than \$.70 per litre Canadian.

And, our price is going up to around \$1.02 per litre here.

When I am told that we pay an inflated price to justify our charge outside Canada, or our refining costs are higher, I just reply; ?Oh, I get it! I GET it!
